Julio Cesar

Web & Software Developer

Juliusggrdev@proton.me
github.com/Juliusggr

Practice

I build web and desktop applications end to end, from reactive interfaces with TypeScript, React, and Astro to high-performance tools with Rust and Node.js.

A self-directed practice grounded in clean architecture and code that ships. Open to roles.

Project

Fablecraft a voxel sandbox in the browser, built from scratch, with no libraries and no external assets.
https://github.com/Juliusggr/fablecraft

Stack

TypeScript, React, Astro, Tailwind CSS, Rust, Node.js, Git.
